

The fourth transnational meeting of the Digital Womanist project, which took place in Bucharest, Romania, and was hosted by the University of Bucharest partner, concluded on September 29, 2023. Spanning two intense days, from September 28 to 29, the meeting served as a platform for extensive discussions and collaborative efforts among all project partners. The primary focus of the discussions revolved around the finalization of the Digital Womanist Handbook and the design of the experimental phase.

The project aims to establish an international multi-actor network involving academic and research centers, as well as public and private cultural organizations. The focus is on adapting higher education programs to meet current and future labor market needs. This includes the development of a new university curriculum, "Digital Womanist," emphasizing digital hard skills for students with a humanistic background.

The project involves the digital integration of learning activities, offering access to interactive video training pills online, enhancing skills related to augmented and virtual reality, app development, and minigames. A blended training course will be experimented with, engaging at least 90 female students in partner countries. Work-based learning sessions will provide practical experience in addressing real-world problems, fostering relational, negotiation, planning, managerial, and technological skills.

FOURTH TRANSNATIONAL MEETING

Following a comprehensive analysis, the outcomes of the Learning, Teaching, and Training Activity (LTTA) underwent meticulous examination and synthesis. The objective was to pinpoint common or shared elements within the results. A pivotal achievement during this meeting was the successful validation of Project Result 3. This validation was realized through a thorough verification process that underscored the effectiveness and coherence of the project outcome with its initial objectives.

During the recent meeting, partners engaged in a comprehensive discussion centered around upcoming developments and ambitious goals to be achieved in the near future. Particularly, the focus was on advanced techniques to enhance microlearning activities through the use of a dedicated platform, aiming for more effective and personalized learning experiences.

Another key point of the meeting was the implementation and thorough examination of data regarding the selection of stakeholders, emphasizing the importance of involving the most relevant parties to ensure the success of business objectives. In this context, targeted strategies were examined to improve engagement and collaboration with stakeholders, with the goal of establishing fruitful relationships.

Simultaneously, significant efforts were dedicated to planning and examining the aspects related to information dissemination and the sharing of achieved results. This process involved a detailed analysis of the most effective ways to communicate and disseminate progress, ensuring appropriate transparency and accurate information sharing.
